

Asset Tracking

Government Asset and Inventory Management

Track every capital asset, piece of equipment, and inventory item across your organization -- with depreciation schedules, maintenance history, and GASB 34-compliant reporting.

Government agencies manage thousands of assets across multiple locations and departments. Brixton Asset Tracking gives you a single source of truth for every asset from acquisition through disposal, with the GASB 34 reporting your auditors require.

Core Capabilities

- Capital asset register with full lifecycle from acquisition to disposal
- Depreciation calculation: straight-line, declining balance, and units-of-production
- Asset tagging with barcode and QR code support
- Mobile scanning app for annual physical inventory counts
- Location and assignment tracking by department, building, and room
- Maintenance scheduling with automated work order creation
- Fleet management: vehicles, mileage, fuel, and inspection records
- IT asset tracking with software license counts
- Inventory management with reorder point alerts
- Surplus and disposal workflow with approval routing

Compliance and Reporting

- GASB 34 asset schedules in required format
- Grant-funded asset tracking with award linkage
- Capital project tracking from CIP to placed-in-service
- Annual inventory reconciliation reports
- Audit trail on every asset record change
- Export any report to PDF or Excel on demand

Physical Inventory and Verification

Annual physical inventory counts are managed through the mobile app. Staff scan barcodes or QR codes on assets to mark them as verified. Assets not scanned after a configurable deadline are flagged as missing. The system generates reconciliation reports comparing the scanned count to the register, surfacing unrecorded disposals and location discrepancies.

Fleet Management

Every vehicle has a complete profile: make, model, year, assigned department, odometer, fuel type, and registration. Preventive maintenance schedules are configured by mileage and calendar interval. The system generates work orders automatically when a vehicle is due for service. Fuel entries, repairs, and inspections are logged against the vehicle record.

Maintenance Tracking

Work orders posted against an asset update its maintenance history automatically. Assets with high repair frequency are flagged for review. Lifecycle cost reports compare cumulative repair cost against replacement cost to support capital planning decisions.

What We Configure For You

- Asset categories and depreciation methods matching your accounting policy
- Department and location hierarchy matching your org structure
- Barcode and QR code label templates for your asset inventory
- Custom fields for agency-specific asset attributes
- Threshold configuration for what qualifies as a capital asset
- Fleet maintenance schedule templates for your vehicle types
- User training sessions during onboarding

Platform Specifications

White-Label Deployment

The staff platform and mobile app carry your agency branding. Barcode label templates include your agency logo. All reports are formatted with your agency header. The platform can serve as a shared asset registry across multiple departments.

Deployment	Cloud-hosted and managed by Brixton Systems.
Access	Browser-based. No software installation required.
Mobile App	iOS and Android. Works offline, syncs when connected.
Barcode Support	Standard 1D barcodes and QR codes.
Data Security	AES-256 encryption. Role-based access by department and asset category.
API	REST API available for reporting and data export.
Reporting	Built-in report library plus custom report builder. Export to PDF and Excel.
Uptime	99.9% on Brixton-managed hosting.
Support	Email and phone support. Dedicated onboarding assistance.
